EDUCATION

Bachelor of Science (Honors) in Computer Science | Iowa State University, Ames, Iowa
Top 2% (Class of 2027) | 5x Dean's List recipient

May 2027
GPA 3.51/4.0

EXPERIENCE

IIoT Software Engineer Intern | Grace Technologies | Davenport, IA

May 2026- Present

- **Architected a dual-authentication MCP server** in C# routing external customer traffic (MH OAuth) and internal employee traffic (Entra ID) through a single endpoint via token-issuer inspection and a normalized principal abstraction, serving ~100 tenants under a sub-5-second p95 latency target.
- **Built a deny-by-default authorization engine** with tool-level RBAC and hard tenant isolation, gated by automated cross-tenant isolation tests enforced in Azure Pipelines CI/CD on every build; implemented Key Vault-backed kill switches and Azure Monitor audit logging with before/after state capture for all write operations.
- **Improving OCR-based field-extraction accuracy** for an automated purchase-order processing pipeline, refining the AI prompt logic used to extract structured fields (line items, pricing, addresses) from scanned documents ahead of downstream ERP integration.

Undergrad Research Assistant | TrAC | Iowa State University

Feb 2024- May 2026

- **Designed a 42-field causal schema** to standardize crash scenario descriptions across 5 domains, enabling structured simulation parameter generation from natural language crash reports.
- **Developed Sim2Video, an end-to-end pipeline** converting natural language crash descriptions into physics-based CARLA simulations, generating synthetic training videos across 10 crash families from 1,013 real crash records.
- **Co-authored SignalVerse accepted at CTRG 2025**; presented Sim2Video research at NCRC, Harvard University.

Data & Web Solutions Intern | Netqom Software Pvt. Ltd. | Los Angeles, CA

Jun 2025- Jul 2025

- **Automated data cleaning with Python and Pandas**, and built Tableau dashboard visualizing client revenue, cutting reporting effort by 62% and bid response time by 15%.
- **Engineered real-time infrastructure** using Node.js/Express API with MongoDB, enabling simultaneous tracking of 20+ projects.

PROJECTS

Answerlytics | Python, LangGraph, Whisper, ChromaDB, FAISS, Docker

May 2026- Present

- **An AI-powered interview coaching tool** that transcribes spoken answers via Whisper, evaluates content and delivery against the user's resume, and generates recruiter-style feedback grounded in real interview transcripts through a LangGraph pipeline.
- **Implemented the evaluation stage to score spoken answers** against resume-specific context rather than generic rubrics, using FAISS similarity search to ground feedback in comparable real interview experiences.
- **Containerized the pipeline with Docker and automated build-and-test CI via GitHub Actions**; replaced print-based debugging with structured JSON logging capturing per-stage latency.

SequelAI | Node.js, Express, React, SQLite, Claude API

Jan 2026- May 2026

- **Devised a multi-agent system with role-specialized agents**, Claude Sonnet for real-time customer query resolution, Claude Opus for automated weekly BI report generation, coordinated through a shared interaction-logging layer.
- **Delivered as a production embeddable widget**, integrating into any client site via a single script tag with no backend setup required on the client side.

SensorIQ | Python, Flask, LLMs, RAG, MySQL

Feb 2024- Mar 2026

- **Constructed an LLM-powered natural-language-to-SQL interface** over a multi-state traffic sensor test-result database, translating free-text queries into validated SQL against a MySQL-backed schema.
- **Established a submission pipeline enforcing schema validation** and role-based access control for verified testing facilities, centralizing sensor performance data across states into a single queryable repository.

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, TypeScript, Java, C#, C
- **AI/ML:** Agentic AI, LLMs, LangChain, LangGraph, RAG, Multi-Agent Systems, Prompt Engineering
- **Frameworks & Tools:** React, GraphQL, Node.js, Flask, Express, MySQL, MongoDB, AWS, Git, MCP
- **DevOps/Cloud:** Docker, Azure Pipelines, Azure App Service, CI/CD, Git

LEADERSHIP

Director of Technology, 180 Degrees Consulting | LAS Pulse | Vice President, LAS student Council | Undergrad Research Ambassador
